

Satellite Radio is the best thing to happen to public radio in my lifetime. The National Association of Broadcasters needs to be dismantled & thrown into moth balls along with the FCC. These organizations cannot possibly see the great things that can be accomplished by Satellite Radio & Online Internet Broadcasting & therefore have shown that they are overblown , ignorant , bloated , useless organizations run by men & women that would go hungry in the streets or have to apply for welfare were they to have a original or useful productive idea that tha general public in our nation could enjoy.

Please reject the NAB's petition 04-160 . I would not even wipe my butt with such a document for fear that the ignorance contained within it would rub off on me & make my future children cripples of the mind or cause my bottom end to break out in a rash.
